

APIGEE Product Creation Guide

Table of Contents

1. What are Products
2. Steps to create a Product 2.1 Pre-requisite 2.1.1 Create Developer 2.2 Create and Deploy Product 2.2.1 Create Developer App
3. Adding / Removing API' s in product

What are Products

Product (Contracts in a generic terminology) is the set of API' s as offering to the external world. It also provides the option to authenticate either using basic auth or OAuth.

Steps to create a Product

Pre-requisite

Product Specific Developer Apps(Identity) and Developer needs to be created.

Create Developer

Click on Publish >> Developer >> +Developer option on Developer page

Developer in this case is the Application name/ APP Username of the application and Email address belongs to the user or team who have requested the credential

First Name and Username will always be APP+<> Last Name should be User

New Developer

Custom Attributes

Name	Value
------	-------

Create and Deploy Product

Click on Publish>> Product option and then click “+Product” option

Name and display name will be the Application Username eg. APP_PRODUCT_NAME

Description will be the description of the application and the purpose of Product creation

Environment will be the environment where it needs to be deployed. For all internal applications use ENV_INTERNAL

For application hosted on internet deploy on ENV_EXTERNAL environment

Never use ENV_S2S

Access should always be internal only and Key approval will be Automatic
